Triangle Angle Sum Theorem

A foundational concept stating that the interior angles of any triangle sum to 180° . This theorem is fundamental in solving many problems in Lesson 68.

Use of Auxiliary Lines and Geometric Proofs

Students learn to introduce lines, points, or segments to facilitate proofs. Constructing auxiliary lines helps establish relationships between angles and sides that are not immediately obvious.

Typical Problems and Their Solutions in Saxon Geometry Lesson 68

Example Problem 1: Proving Triangle Congruence

Problem Statement:

Given two triangles, with two pairs of corresponding sides equal and the included angles equal, prove that the triangles are congruent.

Solution Approach:

- Identify the Given Data:

- Side AB $\cong$ Side DE

- Side AC $\cong$ Side DF

- Included angles at A and D are equal

- Apply the SAS Criterion:

- Since two sides and the included angle are congruent, triangles ABC and DEF are congruent by SAS.

- Conclude:

- Corresponding angles are equal, and all sides are equal, confirming congruence.

Example Problem 2: Using the Isosceles Triangle Theorem

Problem Statement:

In triangle ABC, $AB \cong AC$. If the base angles at B and C are equal, find the measure of angles B and C if angle A measures 50° .

Solution Steps:

- Recognize that $AB \cong AC$ implies triangle ABC is isosceles with base BC.

- The base angles at B and C are equal; denote each as x.

- Sum of interior angles:

$$50^\circ + x + x = 180^\circ$$

$$50^\circ + 2x = 180^\circ$$

$$2x = 130^\circ$$

$$x = 65^\circ$$

- Answer:

The base angles are each 65° .

Example Problem 3: Applying Theorem to Find Unknowns

Problem Statement:

In triangle PQR, $PQ \cong PR$, and the measure of angle P is 40° . Find the measures of angles Q and R.

Solution:

- Since $PQ \cong PR$, triangle PQR is isosceles with P as the vertex angle.

- The sum of interior angles:

$$40^\circ + 2x = 180^\circ$$

(because angles at Q and R are equal, each denoted as x)

- Solve for x:

$$40^\circ + 2x = 180^\circ$$

$$2x = 140^\circ$$

$$x = 70^\circ$$

- Conclusion:

Angles Q and R each measure 70° .
