Introduction to Digital Code Locks

A digital code lock is a security device that restricts access based on entering a specific sequence or code. Unlike mechanical locks, digital locks use electronic components to verify input codes, providing higher security, flexibility, and ease of use. Digital locks are widely used in safes, doors, lockers, and various security systems.

Why Use Digital Code Locks?

- Enhanced Security: Difficult to pick or manipulate compared to mechanical locks.
- Programmability: Ability to change access codes easily.

- User Convenience: Supports multiple users, temporary access codes, and audit trails.

Understanding Verilog for Digital Design

Verilog is a hardware description language used for modeling electronic systems, especially digital circuits. It allows designers to describe hardware behavior and structure at various levels of abstraction.

Why Choose Verilog?
