Common Questions and Clarifications from Froguts Fetal Pig Answers

Students often have questions about specific structures or functions. Here are some typical clarifications:

How can I distinguish between the stomach and the liver?

The liver is usually larger, darker, and located on the anterior (front) part of the abdominal cavity, with the stomach being more rounded and located posteriorly (toward the back). The liver also has lobes and may be attached to the diaphragm.

What is the function of the umbilical arteries and vein?

These vessels are part of the fetal circulatory system, transporting oxygen and nutrients from the mother via the placenta. After birth, these structures are replaced or become ligaments.

Where is the diaphragm located, and what role does it play?

The diaphragm is a muscular sheet located just beneath the lungs, separating the thoracic cavity from the abdominal cavity. It aids in respiration by contracting and relaxing to allow lung expansion.

How do the reproductive organs differ between males and females?

- **Males:** Testes are located near the kidneys, connected by vas deferens to the penis.
